

Automated Enforcement

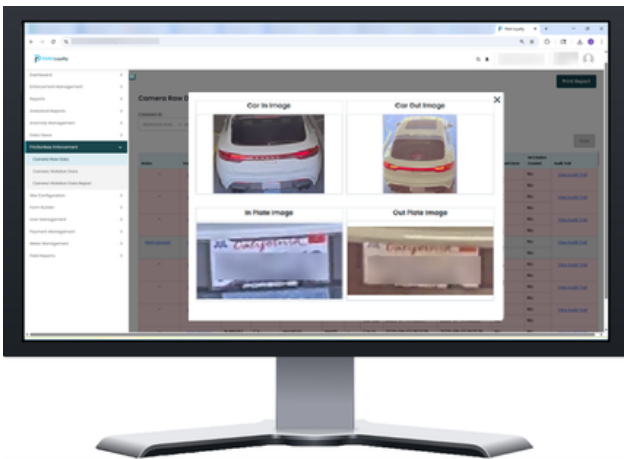

Automated with Human Oversight.

Choose the setup that fits your automated enforcement, with support for any LPR camera and frictionless enforcement aligned with your business rules and workflows. The Automated Enforcement Module aggregates plate data from fixed or mobile LPR systems and validates it against permits, payments and reservations.

Potential violations generate clear, time-stamped evidence packages, supporting e-citation, ticket-by-mail, or traditional delivery methods.

Real-time validation ensures each event is evaluated against the most current data available. The system monitors integration performance and transaction timing, helping identify delays that could impact enforcement accuracy before they become issues. Because it's camera-agnostic and integration-first, the module adapts to existing infrastructure and evolving technologies without requiring system replacement.

Automation doesn't replace oversight. Cases can enter a review queue before processing, allowing staff to make the final decision to issue a citation based on your business rules.

LPR Agnostic

Compatible with any fixed or mobile LPR camera hardware.

Automated Workflows

Supports e-citation, ticket-by-mail and traditional citation delivery.

Seamless Integration

Connection to LPR, permit, payment and reservation systems.

Complete Evidence Package

Supports staff review with final decision authority.

Omnichannel Enforcement

Built for any automated enforcement environment.
